1 Introduction

This is a simple org file, containing asciimath.

1.1 Problem

Org does not have a direct method to export this file to PDF (because asciimath is there literally).

1.2 Solution

I wrote a script `convert-asciimath-in-org-to-tex.sh` which converts the contained asciimath snippets to tex, saves this file with extension `.tex.org`, then exports to tex and/or pdf.

Then we can use regular `org-export-to-pdf` to convert the org file to PDF with latex.

1.3 Formatting asciimath

For the conversion and export to work, the asciimath text must be in backquotes.

Take care of proper backquotes ending, although missing them does not cause any damage apart from incorrect export.

2 Some asciimath examples

This file is testing the process on some math formulas examples

This line should be a tex paragraph.

Asciimath Ex1: Single line matrix in asciimath

$$M = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$$

Asciimath Ex2: Single line subset asciimath

$$A \subseteq B$$

Asciimath Ex3: Inline $A \subseteq B$ from "Inline" to here it should be one line.

Asciimath Ex4: Multi line matrix in asciimath 1:

$$M = \begin{pmatrix} 1 & 2 \\ 3 & 4 \end{pmatrix}$$

Asciimath Ex5: The line below contains Tex matrix, formatted for readability in `.tex` file:

$$M = \begin{pmatrix} 1.1 & 2.2 \\ 3.3 & 4.4 \\ 5.5 & 6.6 \end{pmatrix}$$

end of org file testing 'emacs-org-asciimath2tex'
